

THE AFFILIATE FACTORY

A clip studio every Kevin Trudeau affiliate can run with Claude. It finds Kevin's strongest moments, cuts them into full-screen clips with a six-word hook and captions timed to every word, writes the caption with the member's link, and posts on schedule to Instagram, Facebook, YouTube and TikTok.

BUILT AND RUN BY KAMAY HERRANEN · PROVEN ON A LIVE ACCOUNT

PROOF: ONE ACCOUNT, REAL NUMBERS

214,805

views on one reel, "How rich people actually buy houses"

6 a day

clips posted across 4 platforms, with no one at a computer

\$0

a month in servers. The factory runs on free GitHub Actions

36.8%

skip rate on the top 10% of 112 measured reels, vs 47.8% for the rest

The same engine also makes the clips the VSC team delivers for the Affiliate Portal (GIN Project 15). Every number above comes from the account's own Instagram, TikTok and YouTube data. Each clip has its own record of what was posted and how it performed.

A MEMBER IS LIVE IN THREE STEPS

A member needs Claude Pro (\$20 a month), a free GitHub account and their affiliate link. Nothing else to buy, install or host.

1

COPY THE FACTORY

One button, `Use this template`, makes their own copy of the whole machine.

2

OPEN IT IN CLAUDE

At `claude.ai/code` they pick their copy. Claude already knows the whole system from the kit's instructions.

3

TYPE `START`

Claude asks six questions about their voice and audience, sets everything up and gives each click, one at a time.

From then on, the factory runs on five words: `plan` picks the week's clips in their voice, `clips` shows what was made, `report` says what is winning,

`post` switches on autopilot, and anything else they ask for (a theme week, a series, a new angle) Claude turns into clips.

WHAT THE FACTORY DOES **BY ITSELF**

Claude makes one judgment: which moments to clip. Everything else is automatic, and every clip passes a set of checks that exist because a real clip once failed them.

STOCK	Pulls Kevin's episodes in HD and keeps them encrypted. <code>gate: 1080p minimum source</code>
TRANSCRIBE	Word-level transcript of every episode, 16 at a time in parallel.
CHOOSE	The member's Claude reads every episode and picks 6-9 moments, led by the strongest opening line and the emotion under it. <code>gates: six-word hook with a concrete number or name · no worn-out words · no repeated topics</code>
CUT	Cuts on the exact first and last words, so a clip never opens mid-sentence or ends before the payoff. <code>gates: named edges found in the audio · no advert or testimonial endings</code>
RENDER	Full-screen 9:16 that follows Kevin's face, heavy capitals with one gold payoff line, captions of 1-3 words locked to the sound. <code>gates: captions checked against the waveform · first and last second must be speech · 1080×1920</code>
SCHEDULE & POST	Spreads clips across the member's own time slots and writes a caption for each platform's link rules. <code>rules: 45 min apart · one source at most twice a day · never the same clip twice</code>
LEARN	Reads back views, skip rate, shares and saves, and keeps a living record of what works so every next week's choices get sharper.

EVERY MEMBER'S FACTORY IS **THEIR OWN**

THEIR BRAND FILE

Claude writes it with them on day one and reads it before every task. It holds:

- their name and handles, and who they talk to
- their lane, for example 50% wealth habits, 20% real estate, 30% *Your Wish Is Your Command*
- their voice: teacher, challenger, storyteller or their own
- their comment keyword and their link
- their platforms and posting times

A PROVEN STARTING POINT

Every member starts with what was learned on the pilot account:

- method clips out-reach warnings, 30-40× on shares and saves
- a "What..." opener beats "How..." on TikTok
- full-screen beats letterbox by 20-100×
- BRAIN draws 7× the comments FREE does

Their own numbers then refine it for their account.

POSTING: STUDIO ON DAY ONE, AUTOPILOT WHEN READY

On day one the factory is in studio mode: it makes and schedules every clip, and the member posts from their board, where each caption is ready to copy. The command `post` then connects each platform with Claude guiding every click.

PLATFORM	SETUP WITH CLAUDE	ON AUTOPILOT
Instagram + Facebook	~20 min, one Meta setup for both, no app review	Reels and Stories post fully automatically
YouTube	~15 min, plus Google's free one-time API review	Shorts post automatically with chosen covers
TikTok	~15 min	Each clip lands in TikTok drafts with its caption; one tap to post, room to add a trending sound

COMPLIANCE IS BUILT IN

The kit's rules are enforced on every plan, because one strike costs a member more than any clip earns:

- only footage the affiliate program authorises
- an affiliate disclosure on every post
- no health or cure claims
- no income promises
- no words Kevin did not say
- members post as themselves, never as Kevin or GIN

PILOT FIRST, THEN THOUSANDS

STAGE	WHO	PASSES WHEN
Week 1	5 members your team chooses	Each is live in under 30 minutes of their own time. First clips arrive within 24 hours. Zero compliance flags.
Weeks 2-3	50 members	Members run it without help beyond their own Claude. Every question goes back into the kit.
Rollout	The affiliate base	Launch with a short walkthrough video and a members' leaderboard of what is working.

FOUR DECISIONS FROM **YOUR TEAM**

1. **AUTHORISED FOOTAGE.** Which sources may affiliates clip: Kevin's public episodes, the Affiliate Portal library, or both? We also need a way for GIN's copyright team to recognise a member's clips, so it does not take them down.
2. **DISCLOSURE WORDING.** The exact affiliate disclosure the program wants on every post.
3. **LINKS.** How each member's tracked link is built, so the kit can check that it is set up correctly.
4. **FIVE PILOT MEMBERS.** Names, and a start date.

NEXT ON THE BUILD

STYLE STUDIO

The first three seconds decide a clip. These are next for that opening:

- hook colours drawn from each clip's own frame
- a slow push-in
- a sound hit under the hook

After that, each member gets their own fonts, colours and motion.

THE NETWORK

- Members can opt in to share their numbers, so what one account learns improves every member's playbook.
- Spanish and other languages are on the way.
- An affiliate dashboard is planned for your team.
